NEBRASKA WEEKLY WEATHER AND CROP REPORT

Released 12-11-51 - 11:00 A.M.

Week Ending 12-10-51

WEATHER The week was warmer than normal over the eastern portion of the state but colder in the west, with mild weather during the first half, but cold during the latter half, with below zero temperatures on Sunday morning over the Panhandle and the extreme north-central portion of the state. Heavy snow fell over the north-central portion of the state, and moderate to locally heavy elsewhere over the central and west, but only light precipitation occurred in the east.

November was dry and slightly cooler than normal, with a severe cold spell early in the month.

CROPS About 83% of the corn was harvested up to last Saturday as compared with 74% a week earlier. A year ago this date 90% of the corn was picked.

The percentage of corn harvested by districts is as follows: Northwest, 75%; North-Central, 61%; Northeast, 83%; Central, 76%; East-Contral, 87%; Southwest, 74%; South-Central, 87%; Southeast, 90%. Several counties reported that considerable of the unharvested corn will be left in the field until spring.

Most of the northeastern counties reported spoilage of corn in ricks as well as in cribs. The previous warm weather caused heating, molding and spoilage. Some corn was removed from the cribs. Some are resorting to artificial drying and some ear corn is being placed in silos. Elsewhere in the state there are a few reports of spoilage but corn in the southern counties is keeping better except possibly in the extreme southeastern counties. Much of the corn is being fed, some being shipped and some counties fear a shortage of corn for feeding by next summer. Cooler weather should check spoilage and facilitate marketing.

Rain, sleet and snow was beneficial to wheat in the Panhandle and part of south-western Nebraska. High winds blew off some of the snow. The condition of wheat dropped slightly but is still high. More moisture before going into winter would be helpful. Some of the wheat is being pastured.

The 1951 sugar beet campaign is nearing completion. Potato shipments up to December 7 totaled 2,212 cars, only 400 below the shipments to date a year ago. While potato prices are good in western Nebraska, some growers are holding for \$3 a hundred.

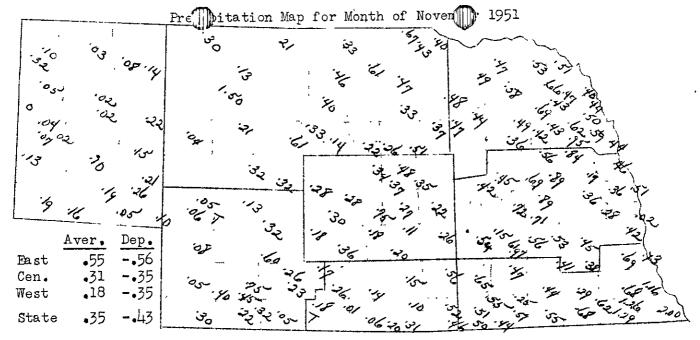

About 10 counties reported the feed grain supply short and 7 counties reported a surplus. There were a few reports of a short supply of hay but generally the supply is ample with a few counties reporting a surplus. Hay is being baled in north-central Nebraska. The condition of range is still high. Most of the counties could use a little more moisture for winter wheat, fall seeded alfalfa and grasses. The subsoil moisture supply is favorable throughout the state.

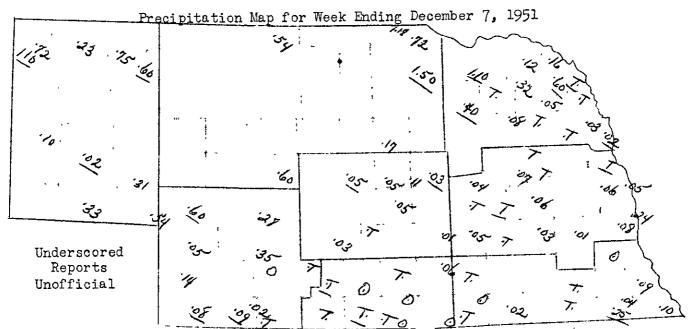

LIVESTOCK Reports continue to indicate increased feeding operations. Larger quantities of corn are required to finish livestock and several counties indicate reduction in next year's pig crops. With few exceptions, the hay and forage supply is ample throughout the state. The blizzard of the past week was a little severe on livestock but no losses were reported. There was blocking of roads due to drifted snow.
